

# MANUAL SEDIMENT TRANSPORT MEASUREMENTS

## LIST OF CONTENTS

<b>1. INTRODUCTION, PROBLEMS AND APPROACHES</b>	<b>Page</b>
1.1 Introduction	1.1
1.2 Sedimentation and erosion problems in rivers, estuaries and coastal seas	1.2
1.2.1 Introduction	1.2
1.2.2 Sedimentation and erosion problems	1.2
1.2.3 Approach of sedimentation problems	1.12
<b>2. MORPHOLOGICAL DEFINITIONS, PROCESSES AND MODELS</b>	<b>Page</b>
2.1 General	2.1
2.2 Definitions	2.3
2.3 Fluid flow and sediment properties	2.4
2.3.1 Introduction	2.4
2.3.2 Sediment classification	2.4
2.3.3 Fluid and sediment properties	2.6
2.4 Sediment transport processes	2.12
2.4.1 Introduction	2.12
2.4.2 Sand transport	2.13
2.4.2.1 Sand transport in steady river flow	2.15
2.4.2.2 Sand transport in non-steady (tidal) flow	2.19
2.4.2.3 Sand transport in combined non-steady (tidal) flow and oscillatory flow (waves)	2.20
2.4.3 Mud transport	2.23
2.4.3.1 General characteristics, definitions and modelling approaches	2.23
2.4.3.2 Cohesion	2.24
2.4.3.3 Flocculation	2.25
2.4.3.4 Settling	2.26
2.4.3.5 Deposition	2.28
2.4.3.6 Saturation	2.29
2.4.3.7 Consolidation	2.29
2.4.3.8 Erosion	2.31
2.4.3.9 Transport of mud	2.32
2.5 Sediments and ecological processes in marine environments	2.38
2.5.1 Overview of processes and impacts	2.38
2.5.2 Ecology related to dredging, mining and dumping of sediment	2.40
2.5.3 Results of field studies related to dredging and mining of sediment	2.46
2.6 Sediments and pollution	2.49
2.6.1 Introduction	2.49
2.6.2 Dissolved and solid-associated materials	2.49
2.6.3 Contaminants	2.50
2.6.4 Processes in aquatic systems	2.52
2.6.5 Dredged materials	2.53
2.7 Mathematical models of sediment transport and morphology	2.54
2.7.1 Introduction	2.54
2.7.2 Flow models	2.55
2.7.3 Wave models	2.61
2.7.4 Sediment transport and morphological models	2.66
2.8 Data Model Integration	2.80
2.8.1 Introduction	2.80
2.8.2 Definition of data model integration (DMI)	2.80
2.8.3 Measures of agreement-Least squares norms	2.80
2.8.4 Role of uncertainties in models and data	2.80
2.8.5 Combination using DMI techniques reduces the uncertainty	2.81
2.8.6 Formulation of the uncertainty	2.81
2.8.7 Stochastic models	2.81
2.8.8 Calibration of models	2.81
2.8.9 Sequential data assimilation in dynamic (time-stepping) models	2.82
References	2.84

<b>3. MEASURING PRINCIPLES, STATISTICS AND ERRORS</b>		<b>Page</b>
3.1 Measuring principles for suspended load transport		3.1
3.1.1 Direct method		3.1
3.1.2 Indirect method		3.1
3.2 Measuring principles for bed load transport		3.2
3.2.1 Direct method		3.2
3.2.2 Indirect method		3.2
3.3 Measuring statistics		3.3
3.3.1 General aspects		3.3
3.3.2 Sampling site		3.3
3.3.3 Number of measurements for suspended load transport		3.4
3.3.3.1 General aspects		3.4
3.3.3.2 Number of points in a vertical		3.4
3.3.3.3 Number of verticals over bed-form length		3.7
3.3.3.4 Number of verticals in cross-section		3.7
3.3.3.5 Number of verticals per tide		3.10
3.3.4 Number of measurements for bed-load transport		3.12
3.3.4.1 General aspects		3.12
3.3.4.2 Number of samples at each location and number of locations along bed form		3.12
3.3.4.3 Number of sampling locations over width of cross-section		3.13
3.3.5 Sampling frequency		3.14
3.3.6 Sampling methods		3.14
3.3.7 Sample preservation and in-situ sampling		3.14
3.3.8 Sampling flexibility		3.15
3.4 Measuring errors and required accuracy		3.16
<b>4. COMPUTATION OF SEDIMENT TRANSPORT AND PRESENTATION OF RESULTS</b>		<b>Page</b>
4.1 Rivers		4.1
4.1.1 Total load transport per unit width		4.1
4.1.2 Bed-load transport per unit width		4.1
4.1.3 Suspended load transport per unit width		4.1
4.1.3.1 Partial method		4.1
4.1.3.2 Integral method		4.2
4.1.4 Total load transport per cross-section		4.6
4.1.5 Presentation of results		4.7
4.2 Estuaries		4.9
4.2.1 Tide-integrated total load transport		4.9
4.2.2 Presentation of results		4.10

<b>5. MEASURING INSTRUMENTS FOR SEDIMENT TRANSPORT</b>	<b>Page</b>
5.1 General aspects	5.1
5.2 Instrument characteristics	5.1
5.3 Selection of sediment transport samplers	5.4
5.3.1 Guidelines for selection of sediment transport samplers	5.4
5.3.2 Sediment transport measurements in rivers	5.5
5.3.3 Sediment transport measurements in estuaries	5.8
5.3.4 Sediment transport measurements in coastal seas	5.10
5.4 Comparison of suspended load samplers	5.16
5.4.1 Comparison of USP-61, Delft Bottle and Pump-Filter sampler	5.16
5.4.2 Comparison of Pump-filter sampler and ASTM	5.19
5.4.3 Comparison of Pump-Filter sampler and Pump-Bottle sampler	5.20
5.4.4 Comparison of Pump-Sedimentation sampler and Pump-Filter sampler	5.21
5.4.5 Comparison of Pump-Sedimentation sampler and Bottle sampler	5.22
5.4.6 Comparison of OBS and Pump sampler	5.24
5.4.7 Comparison of ASTM and Pump sampler	5.28
5.4.8 Comparison of ASTM, OBS and Pump sampler	5.32
5.4.9 Comparison of ABS and Pump sampler	5.34
5.4.10 Overall conclusions with respect to OBS, ASTM and ABS instruments	5.38
5.5 Description of bed load samplers	5.39
5.5.1 Trap sampling	5.39
5.5.1.1 General aspects	5.39
5.5.1.2 Bed-load transportmeter Arnhem (BTMA)	5.41
5.5.1.3 Helley Smith (HS)	5.45
5.5.1.4 Delft Nile sampler (DNS)	5.50
5.5.2 Bed form tracking	5.55
5.6 Description of suspended load samplers	5.57
5.6.1 Classification of samplers	5.57
5.6.2 Bottle and Trap samplers	5.58
5.6.2.1 General aspects	5.58
5.6.2.2 Bottle sampler	5.60
5.6.2.3 Trap sampler	5.65
5.6.2.4 USP-61 point-integrating sampler	5.71
5.6.2.5 Delft Bottle sampler	5.74
5.6.2.6 USD-49 depth-integrating sampler	5.80
5.6.2.7 Collapsible-Bag depth-integrating sampler	5.84
5.6.3 Pump sampler	5.87
5.6.3.1 General aspects for sampling in unidirectional flow	5.87
5.6.3.2 General aspects for sampling in oscillatory flow	5.93
5.6.3.3 Pump-Filter sampler	5.95
5.6.3.4 Pump-Sedimentation sampler	5.101
5.6.3.5 Pump-Bottle sampler	5.107
5.6.4 Optical and Acoustical sampling methods	5.111
5.6.4.1 General principles	5.111
5.6.4.2 Optical backscatter point sensor (OBS)	5.114
5.6.4.3 Optical Laser diffraction point sensors (LISST)	5.125
5.6.4.4 Various other Optical point sensors	5.127
5.6.4.5 Acoustic point sensors (ASTM, UHCM, ADV)	5.132
5.6.4.6 Acoustic backscatter profiling sensors (ABS and ADCP)	5.141
5.6.5 Impact sensor	5.154
5.6.5.1 General aspects	5.154
5.6.5.2 IOS impact sensor	5.154
5.6.6 Nuclear sensor	5.156
5.6.7 Conductivity sensor	5.157

<b>6. MEASURING INSTRUMENTS FOR PARTICLE SIZE AND FALL VELOCITY</b>	<b>Page</b>
6.1 General aspects	6.1
6.1.1 In-situ sampling	6.2
6.1.2 Formulae particle fall velocity	6.2
6.1.3 Definitions of sediment sizes	6.3
6.2 Instrument characteristics	6.8
6.3 Selection of instruments	6.9
6.4 Comparison of instruments	6.10
6.4.1 BAT and VAT for sand particles	6.10
6.4.2 BAT, PWT, Wet-sieving and Coulter-Counter for fine particles	6.12
6.4.3 PWT, BWT and BAT for fine particles	6.14
6.5 Description of instruments	6.16
6.5.1 Photographic instrument	6.16
6.5.2 Sieving instruments	6.17
6.5.2.1 General aspects	6.17
6.5.2.2 Dry sieving	6.17
6.5.2.3 Wet sieving	6.22
6.5.2.4 Air-jet sieving	6.22
6.5.3 Sedimentation instruments	6.23
6.5.3.1 General aspects	6.23
6.5.3.2 Accumulation tube	6.25
6.5.3.3 Bottom Withdrawal Tube (BWT)	6.32
6.5.3.4 Pipet-Withdrawal Tube (PWT)	6.41
6.5.4 Coulter Counter	6.48
6.5.5 Particle size and concentration by Laser Diffraction (LISST, COULTER, PARTEC)	6.49
6.5.6 In-situ photo and video camera	6.64
6.5.7 Particle size and velocity by Phase Doppler Anemometry (PDA)	6.70
6.5.8 Particle size by Laser Reflectance (PARTEC Laser)	6.73

<b>7. MEASURING INSTRUMENTS FOR BED MATERIAL SAMPLING</b>	<b>Page</b>
7.1 General Aspects	7.1
7.2 Bed material samplers: grab, dredge and scoop samplers	7.2
7.3 Bed material samplers: core samplers	7.5
7.4 Particle size of bed materials	7.10
7.4.1 Based on metallic trace elements (MEDUSA)	7.10
7.4.2 Based on acoustic reflection (ROXANN)	7.12
7.5 Movement of bed material particles	7.13
7.5.1 Critical bed-shear stress for initiation of motion	7.13
7.5.2 Tracer studies	7.15

<b>8. LABORATORY AND IN-SITU ANALYSIS OF SAMPLES</b>	<b>Page</b>
8.1 Sediment concentration	8.1
8.1.1 Evaporation method	8.1
8.1.2 Filtration method	8.1
8.1.3 Units	8.3
8.2 Bed material composition	8.4
8.2.1 General aspects	8.4
8.2.2 Detailed method	8.4
8.2.3 Simple method	8.7
8.3 Suspended sediment composition	8.9
8.3.1 General aspects	8.9
8.3.2 Sandy environment	8.10
8.3.3 Silty environment	8.10
8.3.4 Sandy-silty environment	8.11
8.4 Sediment density	8.12
8.4.1 Detailed method	8.12
8.4.2 Simple method	8.13
8.5 Chemical analysis	8.14
8.6 Laboratory equipment	8.16

<b>LIST OF CONTENTS</b>	April	2007
<b>Manual Sediment Transport Measurements</b>		Page: 4

<b>9. IN-SITU MEASUREMENT OF WET BULK DENSITY</b>		<b>Page</b>
9.1	General aspects	9.1
9.2	Mechanical core sampler	9.1
9.3	Acoustic sensor	9.3
9.4	Nuclear radiation sensor	9.4
<b>10. INSTRUMENTS FOR BED LEVEL DETECTION</b>		<b>Page</b>
10.1	Introduction	10.1
10.2	Mechanical bed level detection in combination with DGPS	10.1
10.3	Acoustic bed level detection (Echo-sounding instruments)	10.2
10.4	Optical bed level detection	10.5
10.5	Conclusions	10.5
<b>11. ARGUS VIDEO SYSTEM</b>		<b>Page</b>
11.1	Introduction	11.1
11.2	History of ARGUS	11.2
11.3	ARGUS worldwide	11.2
11.4	ARGUS image types and conventions	11.3
11.5	ARGUS standard image processing	11.6
11.6	ARGUS tools	11.9
11.7	ARGUS applications	11.9
<b>ANNEX A: MEASURING INSTRUMENTS FOR FLUID VELOCITY, PRESSURE AND WAVE HEIGHT</b>		<b>Page</b>
A1	Introduction	2
A2	Velocity sensors	3
A2.1	Velocities and bed-shear stresses, instrument characteristics and accuracies	3
A2.2	Electro-Magnetic Velocitymeter (EMV)	6
A2.3	Acoustic Doppler Velocitymeter (ADV)	8
A2.4	Acoustic Doppler Current Profiler (ADCP, UVP)	10
A2.5	Phased Array Doppler Sonar (PADS)	12
A2.6	Coherent Doppler Velocity Profiler (CDVP) and Cross-Correlation Velocity Profiler (CCVP)	15
A3	Comparison of measured velocities	16
A3.1	Electro-Magnetic Velocitymeter (EMV) and Laser Doppler Velocitymeter (LDV)	16
A3.2	Acoustic Doppler Velocitymeter (ASTM) and Electro-Magnetic Velocitymeter (EMV)	18
A3.3	Acoustic Doppler Velocitymeters (ADV)	22
A3.4	Ultra-sonic Velocity Profiler (UPV) and Particle Image Velocitymeter (PIV)	27
A4	Fluid pressure and wave height instruments	28
A4.1	General instrument characteristics, accuracies and selection criteria	28
A5	Comparison of measured wave heights	33
A5.1	Pressure sensor and capacity wire	33
A5.2	Pressure sensor and surface following wave gauge	34
A5.3	Pressure sensors	36
A5.4	Velocity sensor, fluid pressure sensor and capacity wires	38
A5.5	Pressure sensor and resistance wave staff	39
A5.6	Accelerometer and DGPS on wave rider bouy	41
